### EVERBLOOMING PEONY FLOWERING TEA ROSE—VIGOROUS AND HARDY

2114 "STRATFORD"

Originated from a cross between two historical Roses, the noted LaFrance and the beloved Marechal Niel. Named Stratford, commemorating the birth place of Gen. Robert E. Lee.

The color of the Rose is a lustrous pink, heavily shaded with salmon. The form is somewhat quartered, reminiscent of the Roses that probably grew a century or more ago in the gardens at Stratford, Virginia. Its blooms are intensely fragrant and borne on long stems, opening into large blooms so extremely double that there scarcely seems to be room for all the petals. \$1.50 each; 3 for \$3.75, postpaid.

## 2201 KRIDER'S SPECIAL "ALL-PURPOSE ELEVEN" EVERBLOOMING ROSE COLLECTION

Made up of eleven of the outstanding Roses of America. Each year we travel thousands of miles checking and observing the performance of different Roses. Varieties must have thoroughly proven themselves before being included in this group.

We believe this collection consists of 11 Roses which will give the average Rose grower complete satisfaction no matter what state he lives in. It is "All-Purpose" for the following reasons:

**First**—Because of the wide range of colors. Practically every color known in the Rose world is represented in this collection.

**Second**—Because they are hardy in all sections of the country. Even in far northern climates they do well if given average winter protection.

**Third**—Because they are offered at a price which all America can afford. No premium prices are asked for these splendid Roses.

# Krider's Ten Commandments On Rose Growing

**1st, Location.** Rose bed should be in a sunny location and the soil should be of good garden grade and well drained. Fertilizer or well rotted manure should be thoroughly worked into the soil as the bed is spaded.

**2nd, Care Before Planting.** Unpack and plant Roses as soon as received from the nursery if at all possible. If you cannot plant at once, unwrap the plants and heel them in the ground until ready to set in their permanent places.

**3d, Planting.** In planting, set the plants with the bud, or joint, just above the roots, about 1 1/2 inches below the surface of the soil. Have holes large enough to avoid crowding of the roots and be sure soil used for filling in is finely pulverized. Tramp soil firmly a couple of times as the hole is filled and leave a slight depression around each plant to retain water. Allow 18 to 24 inches between plants when figuring the number of plants needed for a bed.

**4th, Care After Planting.** If some plants appear dead and refuse to leaf out within a reasonable length of time after planting, try covering them with a piece of wet burlap. Soak the burlap with water two or three times daily and leave over the plant 48 hours. This will make most of them start leafing very soon. Some varieties seem to be slower than others in starting and we find the above method will sometimes literally bring out plants that appear to be brown and entirely dead. Try it, and you will be amazed at the results.

**5th, Pruning.** As soon as planting is completed see that all plants and the soil around them is thoroughly soaked with water. Cut back all canes to a length of 4 or 5 inches at planting time. This is very important as the root system of a newly transplanted Rose bush will not be able to leaf the canes to their entire length and many times plants will simply die in trying to do so. Each succeeding spring all canes should be cut back to the 4- or 5-inch height as stated above. This causes strong new growth and abundant bloom to develop.

**6th, Fertilizing.** Keep the Rose planting well watered at all times when there is no natural rainfall. A reasonable application of fertilizer applied twice during the summer months, with an interval of at least 30 days between applications, will induce added growth and extra quality in blooms.

**7th, Cultivation.** Frequent cultivation after planting will maintain a dust mulch on top of the soil which will conserve moisture and continue growth. Rather shallow hoeing gives best results and keeps the beds free from weeds. Keep soil loose this way until about Aug. 1, after which it is well to allow the stock to harden and mature for wintering.

**8th, Spraying.** For leaf spot and aphid apply Krider's Multi-Purpose Spray or Dust. Apply every two weeks or as often as needed. For slugs or leaf eating worms apply arsenate of lead.

Remedies for Chewing Insects. Leaf-eating insects such as beetles, weevils, grubs, worms, etc., are controlled by poison applied to the leaf. Arsenate of lead is most commonly used. Rotenone or pyrethrum should be used on vegetables. DDT is effective on some things, for instance, leaf-miners, chinch bugs in lawns, codling moths on fruits.

Combinations of fungicide and insecticide chemicals are time savers for the small garden. These materials come under various trade labels. Consult us and we will be glad to offer suggestions.

**9th, Watering.** Don't sprinkle beds—wet them thoroughly. If a hose is used, remove the nozzle and let the water soak into the ground until it is saturated for several days after good drenching like this. Water in the evening or early morning if possible.

**10th, Preparation of Soil.** Any soil that will grow good Potatoes or garden plants will grow good Roses. It is not necessary that the Rose bed be entirely of clay soil. Good, thoroughly enriched gravel soil, or loam soil, will grow as good Roses as clay. The only time it is desirable to add some clay is if the soil of the Rose bed is pure sand.

## 2143 HARDY MULTIFLORA ROSE PLANTS

**For Dense, Stock-Proof Living Flowering Fences,  
also Farm Fences**

Most of you have no doubt read the articles appearing in various magazines recommending the Multiflora Roses for use on farms and suburban property. This is the type of Wild Rose understock onto which Hybrid Tea Roses are budded. It grows prolifically and is hardy in the most extreme situations. Seems to withstand cold and drought and thrive in poor soil. It is the answer to your search for something to make a living fence which will, when matured, be practically stock or trespasser proof. The branches grow spreading and tightly massed. Grows rapidly and quickly forms a dense fence or hedge. May be trimmed if desired. Plant 12 inches apart for a dense, tight fence or hedge; 18 to 24 inches apart for a property line fence or looser hedge.

## WHAT ARE FLORIBUNDAS?

Floribundas are an entirely different and distinct group of Roses. They are extremely hardy, doing well under the most adverse conditions. They are the most prolific of bloomers. Floribundas start blooming very early in June and continue to produce constantly until freezing weather. Their blooms are like the Hybrid Teas in form. They grow vigorously with canes from 20 to 30 inches in height. Floribundas are one of the best plants we know of for bedding and for borders. Their foliage is attractive and not easily subject to disease, and their constant blooming habit makes them desirable wherever a long and colorful flowering season is needed.

### THE GROWING OF BLACKBERRIES and RASPBERRIES

Plant Raspberries in well drained cultivated soil. Set plants with the crown or eye about 1 inch below ground level. Raspberries should be set 4 feet apart each way. As soon as the bearing season is over, all old wood or canes should be cleaned out and new growth cut back about one-third. This permits good bearing wood to develop the next year's crop.

MRS. A. K.

Beaumont, Texas.

May 4, 1953.

I received yours of April 21, and thanks for asking my permission to use my testimonial for the thornless Festival Rose. Yes indeed, and I feel highly complimented you have asked me to recommend Festival. It is one of the best red Roses I have, I can always rely on my thornless Festival either in climber or bush varieties. I love it for foundation planting as it has no thorns to tear. It does fine in this Gulf Coast country where we have so much rain and salt evaporation and hot summer sun. I get many compliments on my Festival Rose.

## 3434 NEW "MORaine" LOCUST

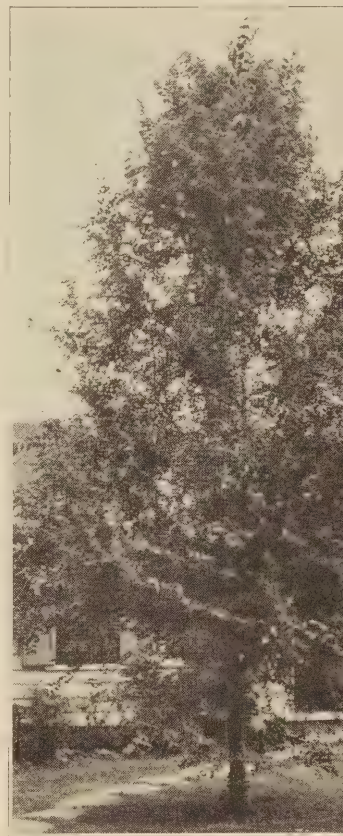

Plant Patent No. 836

### AMERICA'S GREAT NEW SHADE TREE

Developed and introduced by Siebenthaler Company of Dayton, Ohio. The perfect answer to the demand for a clean, fast-growing, long-lived shade tree.

The MORaine LOCUST is a round headed tree when young but tall and vase-shaped when older. Mature trees attain a height of 80 to 100 feet with lower branches high enough to clear a two-story house. This feature permits planting the tree closer to the house than is the case with most other trees. Leaflets are small and in the fall they drift in between the grass blades on the lawn making very little raking or clean up. Very little pruning is needed as the lower limbs self prune as the tree grows. Tests show this new tree to grow more rapidly than either Silver Maple or Chinese Elm. It withstands drought and heat and cold. Thrives under adverse city conditions as well as on the plains where rainfall is slight. Excellent for either lawn or street planting. One of the best new tree introductions for American homes.

## DO NOT ALLOW YOUR PHLOX TO GO TO SEED—This is Very Important

Keep blooms cut as they fade. If you permit plants to go to seed they will drop hundreds of seeds right around the base of the plant. Next year masses of seedlings will spring up. These usually have the old magenta color and soon kill out your true variety. This soon makes the bed a mass of seedlings.

# THREE SUPERB PERENNIAL EDGING OR DWARF HEDGE PLANTS. All Are Hardy

Teucrium—Effective Edging or Dwarf Hedge

Dwarf Iberis or Hardy Candytuft—Practically Evergreen

Sedum Spectabilis or Live Forever—Versatile and Ruggedly Hardy

## 4169 TEUCRIUM - Beautiful Perennial Hedge or Edging

Ideal for all edging work, or for low border hedges. Foliage is evergreen for ten months of the year and plants stay dwarf. Ten to fifteen inches is as high they they grow and an occasional very light trimming will hold their beautiful compact shape.

Hardy in all sections of the country and thrives in most any location. Ideal in front of low walls.

Should be planted 6 inches apart for a dense hedge. Note how effective Teucrium is when edging a perennial bed as illustrated.

Four to five plants in a group will make an ideal corner clump for a perennial bed or the corners of a Rose garden.

Don't fail to get some of these plants for that dwarf hedge you've been wanting.

**35c each; 10 for \$2.50; 25 for \$4.50;  
100 for \$17.50, postpaid.**

## 4170 IBERIS—DWARF HARDY CANDYTUFT

**EXCELLENT FOR FLOWERING EDGINGS—  
ALMOST EVERGREEN**

One of the loveliest of the semi-dwarf plants. Foliage is almost evergreen, remaining green until almost New Years. Each spring the plant is covered so densely with white, snow-flake-shaped blooms that it really resembles a small mound of snow. Very hardy, easily grown and requires only average garden soil. Reaches only about 12 inches in height, which makes it invaluable for the foreground in perennial beds or for low borders.

**Nice 2-Yr. Plants, 40c Each; 4 for \$1.50;  
10 for \$3.50; 25 for \$6.50, postpaid.**

## 4182 SAPONARIA

**VINE-LIKE PERENNIAL FOR TRAILING OVER WALLS  
AND TERRACES—FINE FOR ROCKERY—Not Pictured**

We like this the best of all the trailing plants. One main root but it throws out numerous tendril-like branches close to the ground. Foliage is a bright green all season and in spring the plant bears small bright pink blooms in abundance. An excellent plant to plant along the top of a wall where the trailing branches can hang over. **2-yr. field-grown plants, 40c each; 4 for \$1.25; 12 for \$3.00, postpaid.**

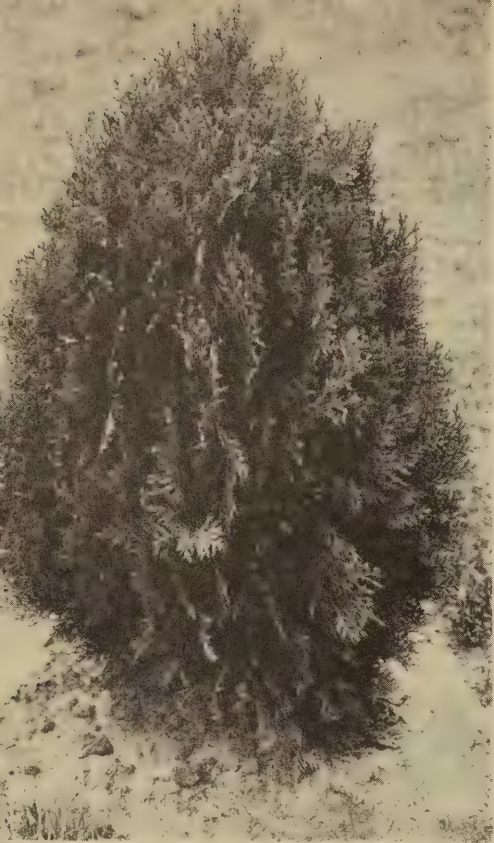

## 4171 SEDUM "SPECTABILIS" OR "LIVE FOREVER"

One of the hardiest of all plants, it seems to thrive under the most difficult conditions. Withstands heat, drought, cold, and shallow, poor soil. Foliage is ornamental all summer long and the large, flat heads of clear pink blooms are produced on sturdy stems and in abundance. Plant ordinarily reaches 12 to 18 inches in height with bloom stems rising 10 to 12 inches above foliage during blooming season.

One of the greatest features of "Sedum Spectabilis" is its versatility. Use it as a flowering perennial in the foreground of the bed or border; plant it among low growing shrubs for increased foliage and color effects; set one plant in each of two pots or pails and use them on each side of the steps; place plants 12 or 16 inches apart in porch or window boxes; best of all is its extreme hardiness and the ease with which it can be grown.

## 5204 NORWAY SPRUCE

A lofty, elegant tree of perfect pyramidal habit, rich in silvery green color. As the tree ages its branches become gracefully pendulous, making it exceedingly beautiful and picturesque. Norway Spruce

Juniper  
Fastigiata

Colorado Blue Spruce

### 5208 COLORADO BLUE SPRUCE

One of the hardiest and most beautiful of all evergreens for specimen planting. Should have plenty of room to develop its branches and stately form. Since Colorado Blue Spruce are grown from seed there is some variation in the blue shading, especially when the trees are young. Should be planted where they have plenty of sunshine to get best color effect. Very young trees are not particularly shapely but the typical symmetrical form comes as the plants grow to 3 feet or more in height. Due to scarcity of Blue Spruce, we can offer only **4-year heavy transplants, 8-10 in., stocky plants at \$1.00 each; 3 for \$2.50, postpaid.** Buy several of them at this low price.

### 5209 JUNIPER HORIZONTALIS

(Andorra Juniper)

Very popular with those who want a prostrate creeping type for use along steps, for rockery planting or for use as a bank cover. Rarely exceed 10 to 12 inches in height. Richly colored foliage which blends well with any other plants used. We offer plants of **12- to 15-inch spread at \$1.75 each; 2 for \$3.00; 6 for \$8.25, prepaid.**

### 5207 GLOBE ARBOR-VITAE

Grows densely compact in a dwarf, globular shape. Foliage is flat and deep green in color. Much used for formal planting and for low, evergreen hedges as they lend themselves admirably to shearing. May also be grown in tubs for use at formal entrances. **10- 12-in., \$2.00 each; 2 for \$3.75, prepaid.**

### THE YEWS

Without doubt the Yews are among the finest and most luxuriant evergreens grown. They are extremely hardy, easy to grow, do well in shade, and harmonize with any other plants.

Pyramidal Arborvitae

### 5210 SPREADING YEW

The spreading variety throws out sweeping branches similar to Pfitzer Juniper. May be kept trimmed back to desired size or to fit allotted space. Foliage is a shade of deep green, soft to the touch and always fresh looking. May be kept sheared for a low hedge, allowed to grow its graceful wand-like branches for informal corner plantings or trimmed into compact shape for formal effects. After the plant is several years old, numerous red berries are borne close to the branches, remaining into winter. **Well rooted, 12- to 15-in., \$2.75 each; 2 for \$5.00, prepaid.**

### 5211 UPRIGHT YEW

General foliage characteristics same as the spreading variety described above, but grows in columnar, erect form. By keeping the plant lightly sheared as it grows, the foliage will be extremely dense and compact from the ground up. Valuable for corner plantings and accent pieces. Does well in shade and seems to be very little affected by disease or pests. **15- to 18-inch, \$2.75 each; 2 for \$5.00, prepaid.**

### 5212 DOUGLAS FIR

A lofty, elegant tree of perfect pyramidal habit of growth. One of the really fine evergreens for specimen planting. Has a beautiful bluish color similar to the Blue Spruce. However, the foliage is of a softer nature and growth is more rapid. Very hardy to withstand severe weather conditions and develops into a sturdy, valuable tree. **Well rooted, 15- to 18-in. trees, \$2.00 each; 2 for \$3.75, prepaid.**

Krider Nurseries, Inc.  
Middlebury, Ind.

Gentlemen: Last autumn I purchased eleven "All Purpose" Roses from you numbered 2201. These Roses cost me a very modest sum of money. When they arrived in November I planted them in my Rose garden where I already had a number of patented Roses costing many times what I had paid for my new Roses.

This spring every one of your Roses burst forth in bud and today they are beautiful. They are admired by everyone who sees them. Feeling that I have received a lot for a little I wish to thank you for such fine plants.

Yours truly,  
ELWOOD L. B.

Ready to grow in your garden for 2 or 3 years before transplanting to permanent landscape locations; also make the growing of Evergreens a profitable hobby. In 3 to 4 years the transplanted plants we offer will be worth approximately ten times the amount you pay for them. Good interest rate?

# RA-PID-GRO

**MAKES A COMPLETE, QUICKLY AVAILABLE, EASILY PREPARED PLANT FOOD BY MERELY ADDING PROPER AMOUNT OF WATER. CONTAINS VITAMINS B<sub>1</sub> and B<sub>2</sub> PLUS ELEVEN OTHER VITAL PLANT FOOD ELEMENTS. CLEAN TO HANDLE, EASY TO USE, PRODUCES PHENOMENAL RESULTS.**

## WHAT IS RA-PID-GRO?

Ra-pid-gro is a complete concentrated plant food formula. Easily made into an immediately effective liquid fertilizer by simply adding water. It will speed up growth of plants now in place and will assure more successful transplanting of new plants.

## HOW IS IT USED?

Just add water at the rate of 1 lb. of Ra-pid-gro to 22 gallons of water. Allow to dissolve and it's ready to use. Apply around each plant. For use on small numbers of plants mix at the rate of a teaspoonful to the quart of water.

## WHAT WILL IT DO?

Ra-pid-gro will work almost unbelievable miracles in promoting rapid and healthy growth on all types of plants. Use it on lawns, around shade trees, evergreens, shrubs, roses, perennials, vegetables and house plants. Many times plants which have been given up for dead will respond to applications of Ra-pid-gro.

## HOW DOES ITS COST COMPARE WITH OTHER FERTILIZERS?

Ra-pid-gro is less expensive than other fertilizers. In the larger quantities it makes your fertilizer cost about 1/2c per pound, as against a cost of about 3c per pound for average fertilizers. Remember 1 pound of Ra-pid-gro makes 176 pounds of rich and complete plant food.

## STOPS EXPENSIVE AND TRAGIC TRANSPLANTING LOSSES Save Them With Ra-Pid-Gro

By using a large tub or pail and mixing Ra-pid-gro with water at the rate of 22 gallons of water to 1 pound, you have a solution in which to dip the roots of the plants before setting out. If this is done, you will practically eliminate transplanting losses. Trees, shrubs, roses, evergreens and similar plants should set in the solution 3 to 4 minutes. Berry plants 1 minute. Vegetables and house plants just dip and remove. Grass and vegetable seeds should be sprinkled with Ra-pid-gro before sowing. Use balance of solution for watering after planting plants or sowing seed.

## HOW MUCH WILL I NEED?

Figure at the rate of 1 lb. of Ra-pid-gro for each 100 lbs. of other fertilizer you have been using. Or the manufacturer recommends the following: for a lot 40x60 ft. with 15 shrubs, 20 feet of hedge, 3 fruit trees, 2 evergreens, 12 roses and 800 sq. ft. of lawn, 5 lbs. of Ra-pid-gro for a season's feeding. A lot 40x100 ft. with 25 shrubs, 3 shade trees, 4 fruit trees, perennial bed, a few grapes and raspberries, 10 evergreens, a small vegetable garden and 1500 sq. ft. of lawn requires 10 lbs. per season. A lot 75x150 with 48 roses, 40 shrubs, 4 shade trees, perennials, 6 evergreens, hedge, vegetable garden, strawberry and raspberry patch, grapes, 10 fruit trees, and 4000 sq. ft. of lawn will require 20 lbs. of Ra-pid-gro per season.

### HOW TO PLANT AND GROW GOOD HEDGES

Beautiful hedges are easily grown if a few simple instructions are observed. Dig a trench 10 to 12 inches deep and the width of a spade. Set the plants a couple of inches deeper than they stood in the nursery. This insures a dense hedge at the base. Privet should be set 10 inches apart, Barberry about 18 inches. Shrubs such as Spirea 18 inches, Chinese Elm 2 feet, and Evergreens 2 to 3 feet. Spacing may be varied depending upon the density desired. After spacing plants, fill in about one-half of the depth of the trench, then flood with water. After settling fill in balance of the trench and tramp firmly. Leave a slight depression along each side of the hedge to retain water. Keep thoroughly soaked until well started. Privet should be cut back to about 8 to 10 inches after planting to promote vigorous growth. Hedges planted in this manner rarely fail to grow.

## DWARF HARDY BOXWOOD

**5510 For Dwarf Evergreen Hedges**

We have grown quite a nice stock of these plants which have proven entirely hardy in Northern Indiana and now offer them to our customers at a reasonable price. In extreme northern sections they should be given some winter protection.

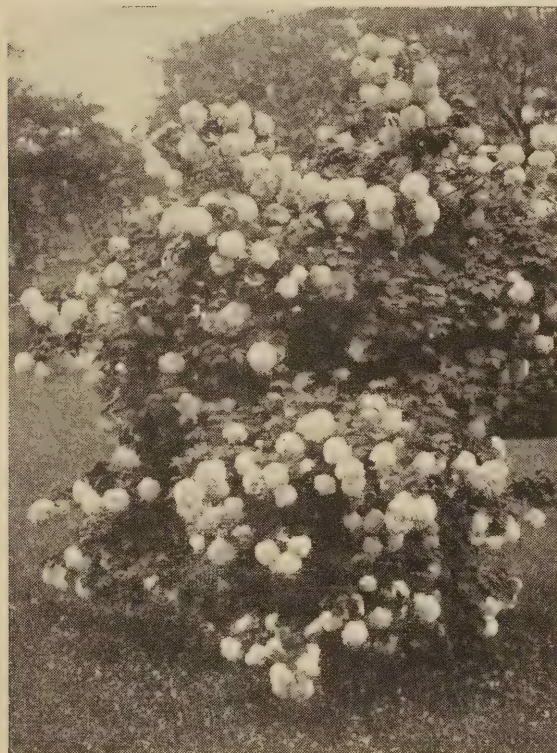

(Note: for close hedges, plant 6 to 8 inches apart. For bed outlining plant 1 foot apart. Will eventually reach 2 to 3 feet high unless severely sheared and kept low.)

Dear Sirs: Wish to say a word of praise to a nursery who send out stock like they describe in nursery catalogs. We have been buying many years and we have set many trees and plants without sufficient roots to ever grow. When our recent order to you was received it was in perfect condition, was taken care of at once. Never have seen such heavy root system or so well wrapped. Every item we ordered has been very carefully planted and we do take care of stock after planting.

Sincerely,  
MRS. C. C. C.
